## Top mounted roller shutter with mosquito net

TP1000K shutter not built-up on both sides. For aesthetic purposes, the front profiles on both sides are smooth. The inspection cover in such a construction is from the bottom or from the front and the operation of the shutter is from the inside of the room.

TP1000K shutter built-up from the inside. The internal front profile is grooved and equipped with a concealed lath. For better aesthetics, the external front profile is smooth. The inspection cover in such a construction is from the bottom and the operation of the shutter is from the inside of the room.

TP1000K shutter built-up from the outside. The external front profile is grooved and equipped with a concealed lath. For better aesthetics, the internal front profile is smooth.

The choice of the inspection cover entails the installation method of the box. The inspection cover in such a construction is from the bottom or from the front and the operation of the shutter is from the inside of the room.

TP1000K shutter with the inspection cover from the front can be built-up only from the outside. However, it can be installed with the cover at the bottom from the outside and inside.

In addition, front components of the shutter can be grooved and additionally equipped with concealed laths to facilitate the box installation.

# CC1000<sup>®</sup>

## Top mounted roller shutter

the simplest solution in technical and economic terms

small shutter box - more light in your interior

works perfectly in thin walls

**Top mounted roller shutters** are installed only at the stage of building the facility or replacement of window woodwork in existing facilities.

In this case, the roller shutter box is applied to the window or door frame. Guides are screwed to the outside of the window frame, and then the whole set is mounted in the window recess. As a result, the roller shutter box is concealed and the roller shutter appears to be part of the window.

## Top mounted roller shutter

solution tested for many years - reliability and satisfaction

reasonable quality- price ratio

perfectly matched to the Polish installation conditions

### Thermal insulation properties of PORTOS roller shutters in the winter.

The top mounted roller shutters recommended most frequently by the manufacturers cause keeping the heat inside the building. In the layer between the shutter curtain and the window there is an airbag constituting an excellent insulating layer, i.e. a specific buffer, both for hot and cold air.

#### If you care about:

- smaller winter heating bills,
- refreshing coolness in the summer,
- safety
- comfort, elegance and quality...

#### You've found the right place!

Our roller shutters perfectly insulate heat, are a barrier for uninvited guests, and after partial lowering they also protect rooms against excessive sunlight and heating.

The **front mounted roller shutter** can be installed at any time, because it is used on the facade. A large selection of boxes, profiles and their colors will meet all your aesthetic expectations. All types of front mounted shutters offered by PORTOS TR7 spółka z ograniczoną odpowiedzialnością spółka komandytowa are available both with and without mosquito net, depending on the customer's needs.
