CC1000®

CC1000 is a basic system of top mounted roller shutters. The inspection hatch is mounted on the front part of the shutter box. They can be installed on windows which frame's max. thickness does not exceed 95 mm. This system cannot have mosquito net. CC1000 roller shutters system is perfect solution for houses and industrial facilities.

The CC1000 shutter box with an open revision hatch.

The CC1000 shutter box has a revision hatch from the front, and therefore it can be build over only from the outside.
The service access to the shutter box is possible form the apartment.

TL1000®

TL1000 is one of the best roller shutter system that can be used in new buildings and these modernized as well. The inspection hatch is installed on the bottom of the box- that gives the possibility of covering the shutter box from the inside of the apartment. They can be installed on windows which frame's max thickness does not exceed 95 mm. This system cannot have mosquito net.

The TL1000 shutter box with an open revision hatch.

The TL1000 shutter box mounted on the wall.

TP1000K®

TP1000K is a system that can be mounted on wide window frames, even up to 202 mm (with broadening to 264 mm). Using an expanding elements, we increase the depth of the box by 31 mm or 62 mm. This system gives a possibility to install revision hatch from the bottom (with a build-up shutter box from the inside) or from the front (during the installation on a wide window frame). The possible service is either manual- with the use of a tape/cord- or electric- with the use of switch or remote control.

The TP1000K roller shutter with an open bottom revision hatch.

The TP1000K roller shutter with an open front revision hatch.

The TP1000K roller shutter can be installed from the internal and external side. Front profiles additionally rifled and equipped with plaster slats facilitate the installation.
The revision hatch in this type of system occurs from the bottom and the roller shutter is operated from the inside.

The TP1000K roller shutter installed from the outer side. The external front profile is grooved and equipped with a plaster slat. In order to have a more aesthetic look, the internal front profile is smooth.
The type of installation depends on choice of the revision hatch. The revision hatch in such a build-up installation occurs from the bottom or from the front and the handling of the shutter takes place from the inside of the room.
The TP1000K shutter with a revision hatch from the front may be installed only from the outside. On the other hand, with the cover from the bottom it may be installed from the outside and from the inside.
Additionally, the front elements of the shutter may be grooved and equipped with plaster slats facilitating the building up of boxes.

The TP1000K roller shutter is installed from the internal side. The internal front profile is grooved and equipped with a plaster slat. In order to have a more aesthetic look, the external front profile is smooth.
The revision hatch in this type of system occurs from the bottom and the roller shutter is operated from the inside.

The TP1000K roller shutter is non-built-up on both sides. For aesthetic reasons the front profiles on both sides are smooth.
The revision cover in such an installation occurs from the bottom or from the front and the handling of the shutter takes place from the inside of the room.

TP1000K® with mosquito net

TP1000K is a system that can be mounted on broad window frames, even up to 188 mm (with a broadening up to 250 mm). Using an expanding elements we increase the depth of the shutter box by 31 mm or 62 mm. Within this system revision hatch can be from the bottom (with an installation box from the inside), or from the front (during the installation on a wide window frame). The possible service is either manual - with the use of tape/cord– or electric - with the use of a switch or a remote control. The version with a mosquito net effectively protects the room against insects, as well as any kinds of pollen, leaves and dirt. At the same time it does not limit access to fresh air and daylight.

The TP1000K roller shutter with an open bottom revision hatch.

The TP1000K roller shutter with an open fornt revision hatch.

The TP1000K roller shutter is installed from the internal and external side. Front profiles additionally rifled and additionally equipped with plaster slats facilitate the installation.
The revision hatch in this type of system occurs from the bottom and the roller shutter is operated from the inside.

The TP1000K roller shutter installed from the outer side. The external front profile is grooved and equipped with a plaster slat. In order to have a more aesthetic look, the external front profile is smooth.
The selection of a revision cover results in the way of installation of boxes. The revision hatch in such a build-up installation occurs from the bottom or from the front and the handling of the shutter takes place from the inside of the room.
The TP1000K roller shutter with a revision hatch from the front may be installed only from the outside. On the other hand, with the cover from the bottom it may be installed from the outside and from the inside.
Additionally, the front elements of the shutter may be grooved and additionally equipped with plaster slats facilitating the building up of boxes.

The TP1000K roller shutter is installed from the internal side. The internal front profile is grooved and equipped with a plaster slat. In order to have a more aesthetic look, the external front profile is smooth.
The revision hatch in this type of system occurs from the bottom and the roller shutter is operated from the inside.

The TP1000K roller shutter is non-built-up on both sides. For aesthetic reasons the front profiles on both sides are smooth.
The revision hatch in such installation occurs from the bottom or from the front and the handling of the shutter takes place from the inside of the room.

MX1200®

MX1200 is a system of roller shutters dedicated for renovation and monoblock windows. The specific construction of the shutter box with an inspection hatch at the front allows for mounting a roller shutter on the window frames of 60 to 180mm. The rounded bottom edge of the inspection hatch and the ability to use end caps on the access cover and the box sides increase the aesthetics significantly. The operation is possible both manual using a tape and electric using a switch or a remote control.

The MX1200 shutter with an open revision cove.

Box of MX1200 roller shutter is adapted for mounting in the insulation layer which allows for mounting MX1200 roller shutters with windows in the monoblock system.

MX1200 roller shutter can be mounted with windows in the renovation system.
This system is used to mount roller shutters with a window without removing old frames.

The MX1200 shutter on the wall.

FRONT MOUNTED ROLLER SHUTTERS

ST2000®
ST2000 with mosquito net

RL2000®
RL2000 with mosquito net

OS2000®
OS2000 with mosquito net

IT2000®
IT2000 with mosquito net

ST2000® with mosquito net

The shutter box cut at an angle of 45 degrees is installed on windows or facades. This system is the simplest solution in technical and economic terms. The size of the box depends on the whole height of the shutter and the type of profile. This often determines the method of installation. The lowered roller shutter is an additional thermal shield with insulation properties. The layer of air between the lowered curtain of the shutter and the window impedes exchange of the heat between the interior and exterior. It enables saving thermal energy necessary for heating of the rooms, while on hot days it protects against their excessive heating. There is a version either with mosquito net or without it.

A TYPE OF INSTALATION

The whole shutter box is installed on the building facade.

The drive (belt or cord) are conducted through the rear of the box, then through an opening in the wall into the rooms.
We perform this installation after the installation of windows.

B TYPE OF INSTALATION

The whole shutter box is screwed on a window frame.

The output of the drive (cord) is through the window frame.
It should be remembered to insert the shutter box with guides into the window recess.

C TYPE OF INSTALATION

The shutter box is mounted conversely inside the window recess.

Remember that between the shutter and the window there would be a place for the opening of the revision hatch.
Also take into consideration that the curtain is also reversed (from the outside we can see its back).

RL2000® with mosquito net

RL2000 is a roller shutter system similar to ST2000 but with and oval shutter box. Preserving an interesting style, it constitutes the simplest solution in technical and economic terms. The size of the box depends on the whole height of the shutter and the type of profile. There are two versions, with mosquito net or without it. The version with a mosquito net effectively protects the room against insects, as well as any kinds of pollen, leaves and dirt. At the same time it does not limit access to fresh air and daylight.

A TYPE OF OF INSTALLATION

The whole roller shutter is mounted on the building facade.

The drive (belt or cord) are conducted through the rear of the box, then through an opening in the wall into the rooms.
We perform this installation after the installation of windows.

B TYPE OF INSTALLATION

The whole roller shutter is screwed on a window frame.

The output of the drive (cord) is through the window frame.
It should be remembered to insert the shutter box with guides into the window recess.

OS2000® with mosquito net

The semi-circular shape of the OS2000 shutter box gives the window an elegant appearance. Moreover, the semi-circular caps for the guides are also available. The size of the box depends on the whole height of the shutter and the type of profile. The version with a mosquito net effectively protects the room against insects, as well as any kinds of pollen, leaves and dirt. At the same time it does not limit access to fresh air and daylight.

A TYPE OF INSTALLATION

The whole shutter is mounted on the building facade.

The drive (belt or cord) are conducted through the rear of the box, then through an opening in the wall into the rooms.
We perform this installation after the installation of windows.

B TYPE OF INSTALLATION

The whole shutter is screwed on a window frame.

The output of the drive (cord) is through the window frame.
It should be remembered to insert the shutter box with guides into the window recess.

IT2000® with mosquito net

This system is a connection of the front mounted shutter with a top mounted shutter. The basic advantage of this system is the fact that it can be installed without enlarging the window holes and at the same time build up the box, as a result of which we would not reach a visual effect, as in the case of top mounted shutters. With a shutter of this type the whole box remains outside the building and service access is ensured through a revision cover in the lower part. The version with a mosquito net effectively protects the room against insects, as well as any kinds of pollen, leaves and dirt. At the same time it does not limit access to air and daylight.

IT2000 with a mosquito net - installation without enlarging.

IT2000 with a mosquito net - installation with enlarging.

NOTES, SKETCHES (view from the inside)

Before filling in the form, please read the instructions.
NOTE: Changing printed contents of the form may result in errors in order fulfilment. Complaints resulting therefrom will be dismissed.
I represent that I provide - to you - personal data of a natural person for the purpose of order fulfilment on the basis on my consent for processing of personal data disclosed in accordance with the Regulation of the EU Parliament and Council (EU) 2016/679 of 27 April 2016.
By filing this order form, you accept the General terms and conditions of sales and deliveries of PORTOS TR7 included in the Roller Shutter/External Blinds Price list or on the website:
https://portosrolety.pl/download/ogolnewarunki_pl.pdf

HOW TO FILL IN AN ORDER FOR PORTOS TOP MOUNTED ROLLER SHUTTERS - CC1000, TL1000, TP1000K, TP1000K WITH A MOSQUITO NET

1. Please provide the type of a window profile to select proper adjustment options - if you fail to specify the window profile, we will deliver a UNIVERSAL adapter. In case of the TP1000K system, please mark a relevant adjustable profile with an "X" sign. If none of the options is marked, the NPS-010 adjustable profile is deemed to be ordered.
2. Provide the number and date of order filing and the requested date of delivery.
3. If the delivery address is different than the company address, fill in such other address.
4. The order concerns the CC1000 shutters, when ordering the TL1000, TP1000K, TP1000K shutters with a MOSQUITO NET, please mark a relevant field in the order form with an "X" sign

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27
Shutter size [cm] (with the box and guide rails)	width of the mosquito net only for TP1000K (division)		box size [mm]	box elevation (only for TP1000K-ZF)	box lowering (only for TP1000K-ZF)	box depth increase (only for TP1000K)	tape outlet, A, B or C Cardan shaft outlet only for TP1000K (Fig. 1, 3)	types of guide rails (PVC/ALU) single (single)/double for TP1000K	cutting angle of PVC guide rails (from 0 to 45°) does not apply to TP1000K-ZF	location of the revision (inspection) cover A or B only for TP1000K (Fig. 2)	Box colour	colour of the revision (inspection) cover (only for TL1000, TP1000K)	colour of the guide rails	type of the shutter profile / slats	colour of the shutter profiles/slats as per the colour chart	colour of the bottom slat	MOSQUITO NET colour of the net	colour of the bottom slat	DRIVE — manual / spring+lock / motor					OPERATION (looking from the inside)	Colour of the plastering strip (TL1000, TP1000K)	Notes: e.g. colour of the winder, tape, additional elements: bolts, switches, remote controls, end caps
width / height											internal / external								tape	crank winder	crank with a universal coupling Cardan shaft	spring + lock + handles	motor	L / R	external / internal	

1. Width of the installed shutters (total width) with guide rails is specified in centimetres
2. Height of the installed shutters (total height with the box) is specified in centimetres, in the TP1000K-ZF system, the height is specified with the box expansion (method of measuring the blinds - page 3.19)
3. Specify the width and distribution of mosquito nets - applies to the TP1000K system with the shutter curtain profiles - one whole or divided mosquito nets. The dimensions shall be specified via measuring the distance from the external edge to the divider rail axis and/or between the axes of divider rails.
4. Height of the box in millimetres, selected as per the table with winders. Height of the mosquito net equals the height of the shutters. The box can be expanded for a surcharge of 5% of the net price of the shutters, if the box size is not specified, standard size as per the table with winders will be assumed. If the TP1000K-ZF system is ordered with the 280 box (actual dimension 281 mm), then the box is in fact the 250 box with the 31 mm expansion.
5. box elevation (expansion) (only the TP1000K-ZF shutters in boxes) - please mark with an 'X' sign. Box elevation increases the height of the box by 3 cm.
6. box lowering (only the TP1000K-ZF shutters in boxes) - please mark with an 'X' sign. Box lowering does not increase the height of the box.
7. box depth increase: +31 mm or +62 mm (concerns only TP1000K).
8. Tape outlet, enter A, B or C (concerns only TP1000K see Fig. 1, table of orders) and Cardan shaft outlet enter A, B (concerns only TP1000K-ZF system, the only available Cardan shaft outlet option is B
9. specify the shutter curtain profile guide rails type - enter SIN (single), DOU (double) or S/DB (single+double). In the TP1000K-ZF system, aluminium guide rails can be used. If you want aluminium guide rails, then fill in as follows ALU-SIN (aluminium, single), ALU-DOU (aluminium, double) or ALU-S/DB (aluminium single+double)
10. enter the angle of the PVC guide rail cutting from 0 - 45°
11. manner of the revision (inspection) cover opening, enter A or B (concerns only TP1000K).
12. colours (boxes): int - internal, ext - external.
Available colours: white - 02, lining (colours of lining - cover). CC1000 - if a white box 02 is ordered and lined guide rails, the external side of the shutters will be smooth and white.
Assuming the colours as above, and additionally with the option of the plastering strip, the external side of the blinds will be grooved, and will be provided at the bottom with a 1.5 cm strip of the same colour as the guide rails (135 mm box will make an exception - the external side will be smooth and provided and lined guide rails - cover - with lining).
TL1000, TP1000K - if a white box 02 is ordered and lined guide rails or revision (inspection) cover, external or internal side of the blinds will be provided at the bottom with a 1.5 cm strip with lining of the same colour.
This type of lining can be used in the TL1000 system only for grooved sides. TL1000K offers more options, here this type of lining can be used for smooth and grooved sides.
Grooved sides for CC1000, TL1000, TP1000K systems are not available in full lining.
13. colour of the revision (inspection) cover (concerns only TL1000, TP1000K). Available colours: white - 02, lining - please refer to the cover
14. colours (guide rails): white - 02, lined (colours of lining - please refer to the cover)
15. enter the selected profile: PA - 39 (aluminium profile), PA - 45 (aluminium profile), PA - 52 (aluminium profile) (PA - 52 and PVC - 52 are only available in the TP1000K system - see tables with winders)
16. colour designation of PA - 39, PA - 45 profile (as per the colour chart on the last page, cover) (if the profile is to be free of any perforations, instead of the 'X' sign, enter 1, e.g. 02 - white perforated, 102 - white, with no perforations)

Note! - profile with no perforations is typically used in case of coil spring lifting mechanism

17. colour of the bottom slat:
- 01 - silver, 02 - white, 03 - grey, 05 - beige, 07 - light grey, 08 - dark brown, 09 - brown, 16 - ivory, 20 - black, 23 - anthracite grey (standard, with no additional fees),
- other varnish colours similar to the colour of the shutter curtain profile shall be specified using the profile colour symbol (apart from colours 22, 30, 48, 54) also non-standard colours as per RAL colour table,
- bottom slat can also be lined (see the list of lining colours - cover),
18. net colours (concerns the mosquito net) - 03 - grey and 20 - black,
19. colour of the bottom slat (concerns the mosquito net) - 01 - silver, 02 - white, 03 - grey, 05 - beige, 07 - light grey, 08 - dark brown, 09 - brown, 16 - ivory, 20 - black,
20. selection of the motor drive (mark with an 'X' sign in the column of the motor drive selected):
tape winder mechanism (no extra fee) - available in white, brown, anthracite grey - if the winder colour is not specified, then white will be assumed as a standard, with a grey tape. In case of shutters with a box with double-sided lining, and in case of the TL1000 shutters with lined revision (inspection) cover, the tape and the winder are brown as a standard,
21. box with the tape crank gear - available in white and brown, if the box colour is not specified, then white will be assumed as a standard, with a grey tape. In case of shutters with a box with double-sided lining, and in case of the TL1000 shutters with lined revision (inspection) cover, the tape crank gear and the tape are brown as a standard,
22. A Cardan gear mechanism 90 0 - crank extension - see Fig. 3,
23. coil spring lifting mechanism and espagnolet lock in the bottom slat,
24. electric drive (if the motor is not specified - cable PORTOS motor will be assumed as a standard, in the TP1000K-ZF system - ELERO SOFT motor),
25. side of the tape winder location (box, crank and switch) looking from the inside.
26. in the TL1000 and TP1000K systems, the side where the plastering strip is to be fixed shall be selected - ext. /int. Please, mark the colour: 02 - white, 08 -dark brown, 09 - brown, 23 - anthracite grey. In case of the TP1000K-ZF system, the following colours are available: DB 703 - metallic grey, 7016 - anthracite grey, 7021 - dark grey, 7035 - light grey, 9005 - black, 9006 - white aluminium, 9007 - grey aluminium, 9016 - white, VSR 240 - beige, VSR 780 - olive. In the CC1000 system, the plastering strip is installed only on the external side. If the client has selected the plastering strip, the box will come with frontal reinforcement. In the TP1000K system, frontal box reinforcement is installed only on the external side.
27. Notes to respective items, e.g. colour of the winder and the tape, additional fit-out, e.g. bolts, etc. Drawings of sets and sketches (all from the inside). Notes can be also made under the table.

ORDER FORM - FRONT MOUNTED ROLLER SHUTTERS

This order form include ST2000. In case of ordering ST2000 with mosquito net, RL2000, RL2000 with mosquito net, OS2000, OS2000 with mosquito net, IT2000, IT2000 with mosquito net please fill in with "X" required box on the form.

200 mm+stabilizing console	210	210	214	195	195	199	167		153

Note! With the shutter width of more than 2 m, use ø 60. In addition, the box reinforcement - WSP is recommended for a width of more than 2 m. When using the reinforcement, values given in the tables should be reduced by 20 cm. For each shutter it is recommended to include SKM mounting anchors counting 40 cm from the side of the box, each subsequent anchor is installed every 50 cm. For shutters with a width of more than 1.80 m it is advisable to include stabilizing consoles. When using a stabilizing console, it is necessary to decrease the values given in the recommended box sizes: at the width of 0 - 2m - by 30 cm, width of 2.01-2.5m - by 40 cm, width of 3m and max. area of 6.5 m2 - by 30 cm (concerns box 160 mm, box 200 acc. table above). PZ - expansion ring from ø 40 to ø 50 or from ø 60 to ø 70.

Shutter box, box sides	Raw aluminium
Inspection hatch, concealed lath	Silver (01), white (02), grey (03), light beige (05), light grey(07), dark brown (08), light brown (09), ivory (16), black(20), anthracite (23)
Guide	Silver (01), white (02), grey (03), light beige (05), light grey(07), dark brown (08), light brown (09), ivory (16), black(20), anthracite (23)
Curtain	Colours available for PA 39 (except for the steel anthracite DB703 (24), woodec turner oak(42)), PA 45 – no additional charge
Bottom lath	Silver (01), white (02), grey (03), light beige (05), light grey(07), dark brown (08), light brown (09), ivory (16), black(20), anthracite (23)
	Veneering of bottom lath - Veneer Colour Chart and turnaround times – see page 2 (except for color 42 woodec turner oak)
Tape roller	Possible length for white or brown colour -5mb (up to 240 cm height, up to 12kg)
Hole drilling in the guides	Charge free – according to the customer's wish

FOR ADDITIONAL CHARGE

Shutter box	Enlargement of the shutter box	5%
Inspection hatch, concealed lath	Powder coated: dark beige(04), green(13), cream white(15), bordoux(19), steel olive(26), basalt grey(27)	15%
	Powder coated: according to RAL Colour Chart	30%
	Veneering– Veneer Colour Chart and turnaround times – see page 2 (except for the quartz grey colour (61))	5%
Guide	Powder coated: dark beige(04), green(13), cream white(15), bordoux(19), steel olive(26), basalt grey(27)	10%
	Powder coated: according to RAL Colour Chart	20%
	One-sided veneering of the guides – Veneer Colour Chart and turnaround times – see page 2	5%
	Guide extension	8,90€/rm
Curtain	PA 39 steel anthracite DB703 (24), woodec turner oak only (42)	5%
Bottom lath	Powder coated: dark beige(04), green(13), cream white(15), bordoux(19), steel olive(26), basalt grey(27)	5%
	Powder coated: according to RAL Colour Chart	10%
	Veneering of the bottom lath (color 42 woodec turner oak only) *	5%
Tape roller 11m	Refers to roller shutters exceeding 240cm (according to the customer's wish – white or brown)	7,00€/pc.
Cord coiler up to 11m	Refers to roller shutters exceeding 240cm (according to the customer's wish – white or brown)	11,40€/pc.
Rolled mosquito-net	Mesh colours: grey (03), black (20). Colours for bottom lath of mosquito-net: silver (01), white (02), grey (03), light beige (05), light grey (07), dark brown (08), light brown (09), ivory (16), black(20), anthracite (23)	89€/pc.
Pleated mosquito-net	Mesh colours: black (20). Colours for profiles of mosquito-net: silver (01), white (02), grey (03) light beige (05), light grey (07), dark brown (08), light brown (09), ivory (16), black(20), anthracite (23)	page: 6.19
Bottom lath of rolled mosquito net, Profiles of pleated mosquito net	Powder coated: dark beige(04), green(13), cream white(15), bordoux(19), steel olive(26), basalt grey (27)	5%
	Powder coated: according to RAL Colour Chart	10%
ZSKM	End cap for aluminium guide mosquito net channel	1,60€/rm
UMIT-137, UMIT-137-20	Mounting bracket for shutter box IT2000: 137, 137 with distance 20 mm	4,30€/pc.
UMIT-165, UMIT-165-20	Mounting bracket for shutter box IT2000: 165, 165 with distance 20 mm	4,70€/pc.
UMIT-180, UMIT-180-20	Mounting bracket for shutter box IT2000: 180, 180 with distance 20 mm	5,30€/pc.
UMIT-205, UMIT-205-20	Mounting bracket for shutter box IT2000: 205, 205 with distance 20 mm	5,40€/pc.

* - Completion date up to 15 business days.

EXAMPLE:

A roller shutter with profile PA-39 mm has the dimensions of 1.5 × 2.0 m. It means that the surface of the profile is 3,00 m2 (1.5 m × 2 m = 3 m2). This value should be multiplied by the weight of 1 square meter of profile PA39 mm, which is 2.8 kg (3 × 2.8 kg=8.4 kg). The height of roller shutter is above 2 m, the hoisting capacity is 8.4 kg, for pipe O 40, motor 40/10 should be chosen, whereas for pipe O 60, motor 60/10 should be chosen.

CAUTION: When choosing a motor you should remember about the weight of 1 m2 of the profile, which is indicated below:

    PA-39 mm*:   **2,8 kg/m^2**
    PA-45 mm: **2,9 kg/m^2**
    PA-52 mm: **3,0 kg/m^2**
    + 20 % additional
  * + 0 % additional

CAUTION! **The manuals for connecting the motors to power supply are included in the assembly and 'operating instructions for the tubular motor' and section (only qualified and authorized electricians may carry out the connections).**

When mounting the radio motors with electronic or mechanical limit system, in accordance with current standards the voltage 230V 50 Hz is required. In the case of deviations from these values, we recommend to use components for overvoltage protection B-C, and D.

50/12	-	-	112 kg	85 kg	-	-	96 kg	83 kg	84 kg	76 kg

EXAMPLE: A roller shutter with profile PA-39 mm has the dimensions of 1.5 × 2.0 m. It means that the surface of the profile is 3,00 m2 (1.5 m × 2 m = 3 m2). This value should be multiplied by the weight of 1 square meter of profile PA39 mm, which is 2.8 kg (3 × 2.8 kg=8.4 kg). The height of roller shutter is above 1,5 m, the hoisting capacity is 8.4 kg, for pipe O 40, motor 4/16 should be chosen, whereas for pipe O 60, motor 6/17 should be chosen.

Oximo io 30/17	30 Nm	57 kg	55 kg	51 kg	90 cm	85 cm **
Oximo io 40/17	40 Nm	75 kg	75 kg	68 kg	97 cm	92 cm **

* - cap for SW60 + very short pipe crown (art. 9 014 685)
**- minimum width using RKS mounting

EXAMPLE:

A roller shutter with profile PA-39 mm has the dimensions of 230 cm × 250 cm. It means that the surface of the profile is 5,75 m2. This value should be multiplied by the weight of 1 square meter of profile PA39 mm, which is 2.8 kg (5,75 × 2.8 kg=16,1 kg). The height of roller shutter is above 1,5 m, for pipe ø 60, motor Oximo io 10/17 should be chosen.

CAUTION! When choosing a motor you should remember about the weight of 1 m2 of the profile, which is indicated below:

PA-39 mm*:   **2,8 kg/m^2**
PA-45 mm: **2,9 kg/m^2**
PA-52 mm: **3,0 kg/m^2**
  + 10 % safety stock
 * + 0 % safety stock

CAUTION! **The manuals for connecting the motors to power supply are included in the assembly and 'operating instructions for the tubular motor' and section (only qualified and authorized electricians may carry out the connections).**

When mounting the radio motors with electronic or mechanical limit system, in accordance with current standards the voltage 230V 50 Hz is required. In the case of deviations from these values, we recommend to use components for overvoltage protection B-C, and D.

Minimum width of the mosquito net	500 mm
Maximum width of the mosquito net	2400 mm
Maximum width of the double mosquito net	3600 mm
Minimum height of the mosquito net	1900 mm
Maximum height of the mosquito net	2600 mm

STANDARD EQUIPMENT

Colour of the mosquito net profile: silver(01), white(02), grey(03), beige(05), dark brown(08), brown(09), ivory(16), anthracite grey (23) *	
Net colour	black

EXTRA CHARGE

NAME	PRICE
Varnishing of mosquito net profiles	
- colours of the basic colour palette ZF3000	5%
- colour palette for roller shutters - dark beige (04), light grey (07), green (13), cream white (15), claret (19), black (20), steel olive (26), basalt grey (27)	5%
- other RAL colours **	10%

* - basic colour palette available for PORTOS catalogue roller shutters
** - order fulfilment up to 21 business days

Pleated mosquito net Single

Pleated mosquito net Double

Measurements are taken by measuring the width and height of the window recess at least in three points. If the measurements differ in several points, in the order - state the lowest value.

	SINGLE PLEATED MOSQUITO NET - INTEGRATED			
width / height	500-1200	1201-1500	1501-1800	1801-2400
1900-2200	449	476	493	563
2201-2600	480	511	532	610

	DOUBLE PLEATED MOSQUITO NET - INTEGRATED						
width / height	500-1200	1201-1500	1501-1800	1801-2400	2401-2500	2501-3000	3001-3600

2201-2600	765	771	778	820	822	886	934

USE AND MAINTENANCE OF ROLLER SHUTTERS

Roller shutters and their components have been specially designed to prevent any permanent deformations, at the assumption that they are used in compliance with the intended purpose.

Respective manufacturer's recommendations must be observed at all times when the roller shutters are in use.

Roller shutters are suitable for use in temperatures ranging from -25°C to +45°C.

Roller shutters shall not be used when the profile is ice-covered.

In case of strong wind, roller shutters should be either completely open or closed. Windows must be closed or otherwise the roller shutter profiles might be torn out of the guides.

Roller shutters must not be continuously driven with an electric motor for longer than 4 minutes.

When roller shutters are moving (opening or closing), no objects or persons shall be located directly underneath the slats or otherwise proper operation of the roller shutters might be impeded. After full opening of the roller shutter, the end slat with gasket should always be positioned in the side rails.

The following equipment is used to close and open the roller shutters: electromechanical drives equipped with an emergency lifting mechanism (crank with a hook that is provided together with the shutter, which should be used only for emergency opening of the shutters, it is not allowed to use the crank as the main drive), manual drives such as belts, cords, universal couplings with a crank, spring mechanism rolling up the roller shutter curtain.

To prevent any curtain blocking when it is closing (e.g. due to the condition left after the house construction), all dirt in the brush seals installed in the side rails of the front mounted roller shutters must be removed. Users should also e.g. fully open and close their roller shutters at least 8 times a month.

Inspection and maintenance works should be performed at least once in every 3 months in compliance with these instructions. Users may perform basic maintenance works, for which no special licences are required.
Such maintenance works shall in particular include: removal of fine sand and other dirt from the curtain and rails as they may scratch the shutter elements or e.g. a visual inspection of the general condition of the roller shutter, inspection in view of any missing parts or efficient operation of all the structural elements.

In case of roller shutters with rolled mosquito nets, net slides in the side rails should be cleaned at least once a month. Failure to observe the guidelines may result in improper net closing and may slow down the full opening of the net.
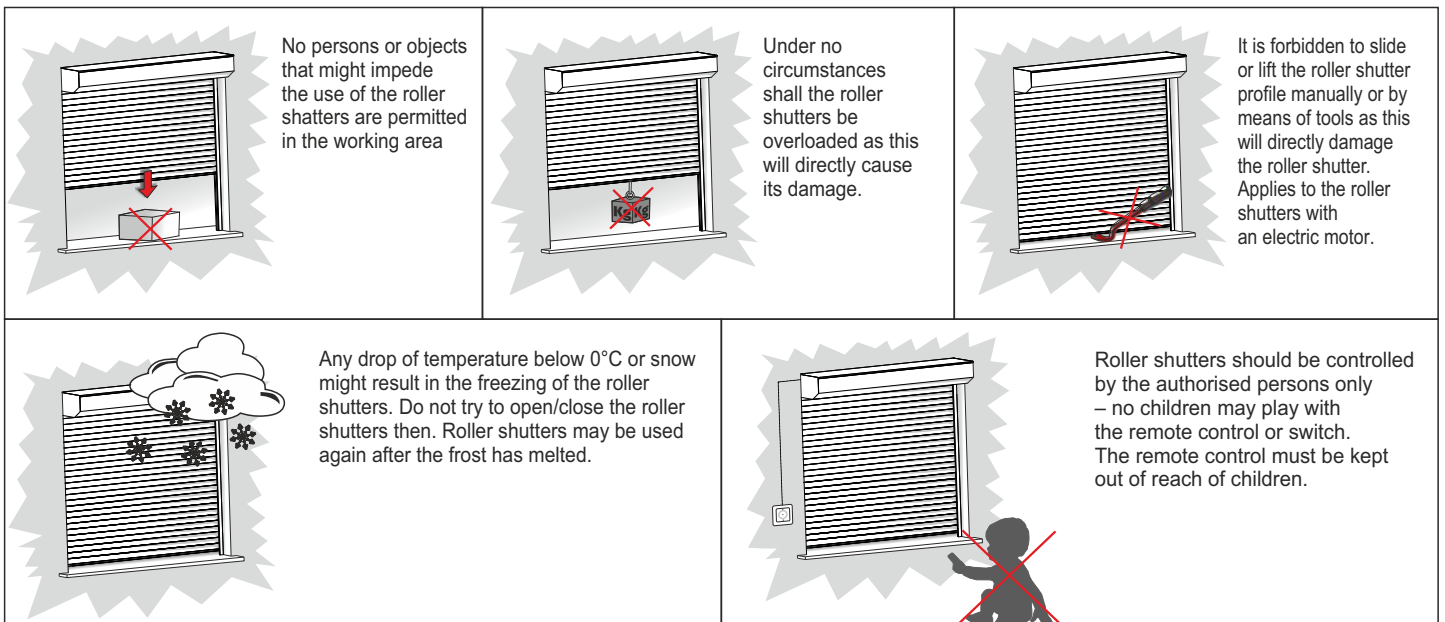

When performing maintenance works, the following must be observed:

1. Maintenance works must be carried out when the front mounted roller shutters are immobilised, it is best to disconnect them from power supply for the duration of maintenance works.
2. Sharp or abrasive cleaning tools shall be avoided.
3. Lukewarm water and mild neutral detergents, preferably at the temperatures no lower than +10°C, shall be used for the cleaning of the roller shutter surface.

   NOTE - detergents and corrosive substances may damage or discolour the coating.

   Any damage caused as a result of weather conditions or normal wear and tear may not be complained about. Wear and tear of the curtain coating demonstrated via minor scratches appearing after approx. 300 cycles of regular use is classified as normal wear and tear.

In case of any individual re-design of the electrically driven roller shutters, it is necessary to adjust the limit switches. The number of slats in the profile might also require adjustment.

No persons or objects that might impede the use of the roller shatters are permitted in the working area	Under no circumstances shall the roller shutters be overloaded as this will directly cause its damage.	It is forbidden to slide or lift the roller shutter profile manually or by means of tools as this will directly damage the roller shutter. Applies to the roller shutters with an electric motor.
Any drop of temperature below 0°C or snow might result in the freezing of the roller shutters. Do not try to open/close the roller shutters then. Roller shutters may be used again after the frost has melted.	Roller shutters should be controlled by the authorised persons only – no children may play with the remote control or switch. The remote control must be kept out of reach of children.	

ALUMINIUM PROFILE PA-39

ALUMINIUM PROFILE PA-45

ALUMINIUM PROFILE PA-52

DESCRIPTION

	PA-39	PA-45	PA-52
Profile's height:	39 mm	45 mm	52 mm
Q-ty of slats per 1m height:	26 pcs.	23 pcs.	19 pcs.
Max. width:	2500 mm	3000 mm	3700 mm
Max. curtain surface:	6,5 m²	6,5 m²	8,0 m²
Weight per 1 m²:	2,8 kg	2,9 kg	3,0 kg
